

Profit from the Asian boom

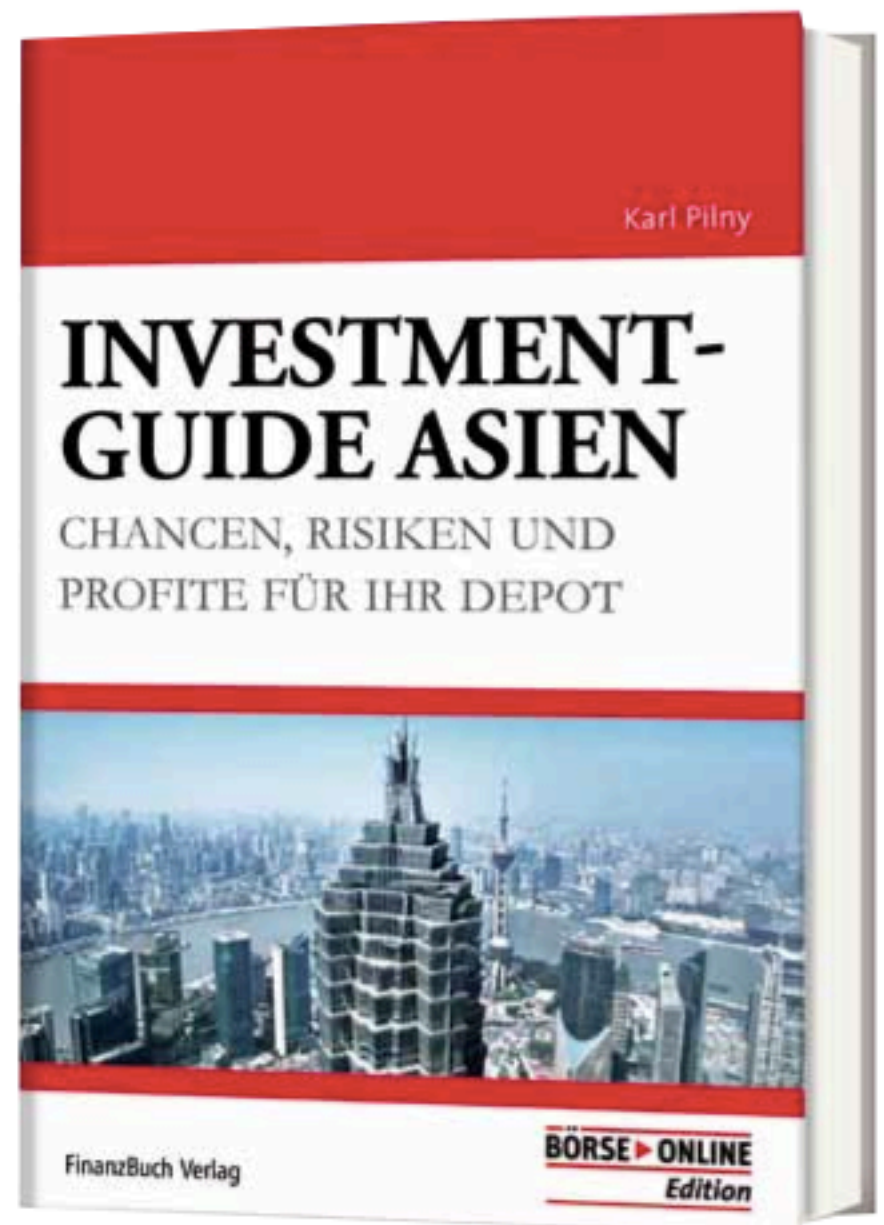

Europe and the USA have taken a few hundred years for industrialisation and the associated ascent to becoming economic powers. In the near future, China and India, in particular, will become serious threats to the pre-eminence of the western powers.

Karl Pilny knows the Asian markets and their rules of play for many years and is convinced that investors in this country too can profit from the development of Asia. In this book, he introduces the new markets with their individual characteristics, discloses chances and also warns about possible risks. A special focus while doing so is in the histories of each country. Juicy profits are not to be made only through the economic growth. In particular, exchange-rate profits make investments in Asia interesting. Karl Pilny is sure: now is the time, to get on board Asia.

Dr Karl Pilny has been intensively engaged for 30 years with the economics, culture and history of Asia. The international commercial lawyer has lived and worked in Asia for many years and is the author of the highly commended trilogy »The Asiatic Century«. With numerous lectures, his extensive consultancy work as well as regular media appearances, he is

deemed to be one of the leading experts on Asia in the German speaking world. He has advised and supported many investments and investment products in, from and to Asia.
